

Let's keep going and overcome the OFF!

Patients with Parkinson's disease struggle at times when their medication phases out. Researchers at Chapman University try to help and are developing a device to provide rhythmic feedback to maintain a stable walking pattern when patients struggle to keep going.

Research study participants wanted!

We are looking for:

- Patients with Parkinson's disease with known daytime symptom fluctuations.
- Non-Parkinson participants.

Procedure:

We are collecting walking data with mobile devices. Participants are asked to wear a small sensors for several hours while continuing their daily routines. A researcher will come to you in order to set up the sensors and will return at the end of the day to pick them up again.

Compensation:

Each study participants receives \$ 50 as compensation for their efforts.

If you are interested in participating in this study please contact:
